

# SECURE ACCESS SERVICES

**Unified, cloud-native security with industry leading technologies.**

**Best-in-class security capabilities for zero trust security and remote access availability.**

**Streamlined user experience with comprehensive coverage, full visibility, and expert services support.**

## SECURE ACCESS FOR THE MODERN AGE

The days of having a clear boundary in a corporate IT and OT environment are over. Cloud platforms and services, SaaS solutions, remote work, and mobile devices have all blurred the lines of where an organization's environment starts and ends.

Traditional security solutions like firewalls, gateways, VPNs, and CASB are unable to provide a unified solution to all of these security challenges and problems. Managing all the disparate solutions and policies to secure modern environment perimeters is a daunting challenge for many organizations.

Incorrectly managed VPNs may expose holes in your firewall exposing vulnerabilities and pathways for threat actors. Endpoint solutions and full VPN usage can be very taxing on an organization's computing and workforce resources.

ADS' access security model provides organizations with a fully managed, single solution to tackle the challenges of modern data security and accessibility. We provide peace of mind and ensure that your cloud, remote, and network environments are all effectively monitored and secured.

# ALL-IN-ONE ACCESS MANAGEMENT

Atlantic Data Security's Secure Access Services provides top tier cybersecurity expertise and technology that is a cost-effective, scalable, and always up to date.

## Best-in-Breed:

ADS partners with the best solutions vendors to put together and provide the best, enterprise-grade, secure access solution for your environment.

## Deeply Customizable:

Our team of cybersecurity experts is able to manage and support a broad range of security products, allowing us to provide vendor agnostic solutions to best fit your environment.

## Comprehensive coverage:

Our Secure Access Services provide comprehensive coverage, securing your network, cloud systems and remote users and devices.

## Incident Monitoring:

We provide rapid, up-to-date monitoring and reporting to detect and remediate potential data loss, anomalies, compromised credentials, and malicious traffic.

## Easy to use:

Our Managed Services team ensures ongoing policy management to deal with the latest threat intelligence and other requirements. We ensure rapid policy changes as required, so you can focus on core business operations.

## Clear visibility:

Our reporting and auditing capabilities give you real time insight into your environment and security posture, along with regularly scheduled high level reports so you can easily review and prioritize.

## HOW IT WORKS

### Pre-implementation

We work collaboratively with our clients to identify the scope of the Secure Access Services engagement and determine which security products can be added, cut, or retained to achieve the organization's goals.

### Implementation

We handle the necessary set up and implementation system to get any security solutions needed for our SA Services integrated with your environment and running smoothly. We develop a clear understanding of your environment, identify critical assets and applications, and ensure that policies are optimally configured to provide security and visibility.

### Management

We ensure regular policy improvements and updates based on threat intelligence and business needs, ensure ongoing coverage and compliance of new applications throughout the environment, and ensure remote access functionality.

### Monitoring

We keep a constant watch over your environment, reviewing audit logs for anomalies, conducting regular malware scans and manage incident reviews to prevent potential data loss or malicious attacks. We review false positives and DLP alerts and enforcement to enable future tuning.

### Support

Our cybersecurity experts remain available to provide rapid troubleshooting and resolution for any disruptions and incidents that may occur so that your organization can pursue its core business goals.
